

DORIC TABLE

design by Carlos Chen

Doric Table(Brown)
Doric Table(Light grey)

The Doric inspiration come from the Greek classical columns. Designer Chen Wei combined the elements of ancient Greek architecture design with modern furniture technology, using the bend steeled plate bending process to create an abstract concise polyhedral shape the column, this is stylist in the exploration of light and angle. Doric takes on a completely different shape of different angles, and the semi-enclosed multiple facades guide the direction of light in the space. The soft light, dark transition and the abrupt turning of the corner form a strong contrast of light and shadow.

On the choice of color and the surface material, fine sanded grain surface treatment to simulate the Greek marble texture image. Gray white makes the vision more comforts, also accord with the image characteristic of marble. Dark brown is more historical. High and low collocation, contrast and harmony are unified with each other, elegant and lasting.

Doric Table(Light grey)

Doric Table(Brown)
Doric Table(Light grey)

A set of two height size, placed together to form the collocation of strewn at random discretion. It creates a dilapidated atmosphere in the ruins of the Greek necropolis. Tall mesa can extend into the sitting area of sofa, need not get up to be able to put the thing such as mobile phone or TV control there. The low style platform is large, steady and honest, which can be used as the main tea table.
