

INCLASS

FINISHES BOOK

Fabrics / Leathers / Materials

We consider the colours and materials as means to express ideas and create emotions as they have the capacity to influence our feelings, perceptions and wellness.

COLOURS CAN DEFINE
OUR WORLD AND
CONNECT US WITH THE
ENVIRONMENT.

This sample book wants to serve as a tool to inspire, communicate and reproduce colours, helping the end user to make their colour ideas come true based on our suggestions.

INDEX

1. SUGGESTIONS OF COMBINATIONS 9

2. FINISHES 30

Upholstery

Metal Paint

Wood

Polypropylene

Rotomolded polyethylene

Table tops

3. CARE AND MAINTENANCE 138

1.

SUGGESTIONS OF COMBINATIONS

URBAN, SIENA, NATURAL, EARTH, CASUAL

URBAN

Elegant, modern, relaxed
or dynamic atmosphere.
Positive attitude, feeling of
calm and security.

SIENA

Raw, velvety and intense tones that embellish and fill the space with subtle elegance.

NATURAL

Refined, natural and ecological with a slightly warm nuance that transmits peace and tranquility.

EARTH

Connection with nature,
holistic and harmonious
lifestyle. Sober, cosy and
timeless colours.

CASUAL

Quiet, relaxed environments
away from noise and
excessive pretensions.

UPHOLSTERY FABRICS & LEATHERS

COM/COL service

The Customer's Own Material (COM) and Customer's Own Leather (COL) services offers the opportunity for customers to have an INCLASS bespoke product with textiles or leathers especially selected by the customer.

Prior to order placement, if the COM/COL is not found in the INCLASS database of approved fabrics and leathers, a sample cutting of the required COM/COL must be submitted for approval.

If COM has stripes or patterns, the sample should be large enough to show the entire design of the fabric. Customer must identify the name and number of units on which the COM/ COL is to be applied.

Once approved, you can place your order. As soon as we receive and check COM/COL in our factory, our customer service will inform you about the production and delivery schedule.

Even after preliminary approval, INCLASS reserves the right to reject COM/COL if necessary when the quality is not satisfactory for the item it is intended to be used on. Even after preliminary approval, INCLASS assumes no responsibility for its overall appearance, durability or any other quality aspect, after being upholstered on our products. Subject to a specific agreements, INCLASS may buy for the customer the COM/COL materials.

COM/COL requirements

Each COM/COL must be identified as follows to prevent order delays or material losses:

- Customer name and purchase order number.
- Clearly indicate the item to which COM/COL is to be applied
- The name of the fabric supplier. Supplier's fabric name with number and colour.

The COM requirements are based on 1,4 meter width plain material. In some models, the quantity of material needed can be optimized by increasing the units ordered. For this reason, our product sheets indicate the quantities required for orders from 1 to 7 units and for orders of more than 8 units. If you need a more accurate calculation, contact our Customer Service. If the fabric has a design that requires specific positioning or pattern matching, our Customer Service should be consulted for additional material requirement. On these type of fabrics an upcharge will be applied.

COL hides must be sent well packed and rolled in a neat manner avoiding creases and roll marks. The leathers can be rejected if are sent in a folded manner.

To determine COL quantity, see COL requirements for each product. Leather is a natural product with a non-uniform surface due to grain, wrinkles, veins and may present differences in tone from one batch to another. For this reason all square meter requirements are estimations. (COL) Square meter requirements are based on hides with an average size of 4-5 m2 of clean usable leather. If the COL has a smaller average hide size, please consult our Customer Service. The usable surface and the shape of the COL hides supplied can make it necessary for us to request more leather after COL is received.

Excess COM/COL will not be returned with the shipment of furniture and will be disposed of after order is completed unless prior arrangements have been made with our Customer Service.

Cutting Direction Guidelines

Cutting direction is based on the fabric width and the way the fabric is cut from the roll and applied to products. The INCLASS Upholstered products usually use the vertical direction. The vertical direction is understood as the direction of the unrolling, leaving the selvages on the right and left sides. The fabric is applied as shown in the illustration.

METAL PAINT & FINISHES

INCLASS powder coats all painted metal components for a durable finish eliminating VOC's (volatile organic compounds) from being released into the environment. The result is a finish that is abrasion and impact resistant.

We offer a wide palette of metal finishes that are priced by grades. M1 colours, M2 colours and chrome.

WOOD

VENEER / PAINTED WOOD

VENEER / SOLID WOOD

Due to natural variations of the wood, finished products may vary from samples in colour, texture, and grain.

Wood parts may contain knots or grain patterns of different tones and are not homogeneous. This may lead to variations from one piece to another.

The wooden parts will darken and change tone with age and exposure to light.

All veneer and solid wood parts are finished with post-catalysed wood coatings, which provide exceptional durability and resistance.

PAINTED WOOD

All painted wood parts are finished with post-catalysed wood coatings with a process of three layers. This process provides exceptional durability and resistance.

BESPOKE WOOD FINISHES

Upon approval and with an upcharge, bespoke wood finishes are available. Contact our Customer Service for pricing and lead times.

Prior to approval, customer will send a sample for matching at least 6x6cm in surface dimension. Once received in our factory and approved, INCLASS will produce a matching sample following acknowledgement of the order. INCLASS will schedule the order for production only when the sample has been approved by the Customer.

Pantone® or RAL colour matches do not require approval and sample matching, but it may be requested by the Customers at a cost to be agreed with our Customer Service.

INCLASS may ask for payments in advance on bespoke finishes.

ROTOMOLDED POLYETHYLENE

Rotomolded polyethylene items are suitable for indoor and outdoor use.

Composed polyethylene colours may present surface irregularities that are intrinsic to these type of finishes. INCLASS will not accept returns due to this

Painted polyethylene colours are available in matt or gloss finish.
Customer must specify.

Upon approval, the bases can also be painted with any of the RAL colours in matt or gloss finish. Contact Customer Service for lead time.

Upon approval other bespoke colours are also available. Contact our Customer Service for pricing and lead time.

CARE AND MAINTENANCE

CARE AND MAINTENANCE

METALLIC STRUCTURES

Cleaning can be done with a non-abrasive cloth and one of the following products:

- Neutral soap, moistening the cloth and drying after cleaning.
- Using a solution of 50% water and 50% alcohol.
- With a specific product for metals.

Limescale marks on chrome may be removed by using a 30% vinegar and water solution or with specific cleaning products for chromed surfaces. Dry thoroughly with a dry non abrasive cloth once cleaned.

***Remark:** do not use sponges, fabrics or abrasive objects under any circumstances. Strong, acidic or alkaline cleaners can damage painted metallic surfaces. It is very important to prevent this.

PLASTICS

Plastic surfaces can be cleaned with a non-abrasive cloth, warm water and neutral soap. Alternatively, you may use a solution of 50% water and 50% alcohol or specific cleaning products for plastic surfaces.

UPHOLSTERY

INCLASS offers a broad range of upholstery materials produced by renowned manufacturers.

To clean upholstered furniture, the gentlest product to use is warm water and neutral soap. This method is suitable for all types of fabrics, leathers, and faux leathers.

FABRICS

We recommend cleaning with warm water and neutral soap. To wipe down by hand, use a clean non abrasive cloth, wring well and be careful not to get the upholstery too wet so that moisture does not get into the foam..

Other methods:

- Ethanol-based disinfectants can be used on polyester fabrics without causing damages on the textile or changes in colour. The concentration should be around 75%.

***Remark:** the colour and texture of wool fabrics in some cases could be affected with this method.

- Chlorine-based detergents can also be used on polyester, but it should be avoided on wool fabrics. Concentration should be 1000-1200ppm.

NATURAL LEATHER

We recommend cleaning with a soft sponge or cloth moistened with warm water and neutral soap. Do not wet it excessively. Dry with a cloth once you have finished cleaning.

FAUX LEATHER

We recommend cleaning with a non-abrasive cloth or soft sponge dampened with warm water and neutral soap. Dry thoroughly with a cloth once you have finished cleaning. Avoid harsh detergents as they may cause hydrolysis and surface deterioration.

Please consult the technical data, maintenance and cleaning recommendations indicated by the manufacturers of each fabric in our finishes book for more information.

***Remark:** Injection extraction cleaners and steamers should be avoided, as they may reactivate the adhesive. If you choose to use them, make sure the furniture is not manipulated during 24h so the adhesive can dry completely and the upholstery is not in risk of showing indents.

***Remark:** INCLASS accepts no liability for users' stains or transfer of garment dyes to the furniture's fabric. This may occur especially with white or light coloured fabrics.

WOODEN SURFACES

LACQUERED MDF OR OAK AND WALNUT VENEER

First of all, dust should be removed with a soft cloth or microfibre cloth, avoiding accumulations that could scratch the surface.

For deeper cleaning, we recommend cleaning the surface with a non-abrasive cloth, warm water and neutral soap. Once finished cleaning, we recommend that you dry the surface thoroughly. Alternatively, you may use specific cleaning products for wood surfaces.

FENIX® & HPL

We recommend cleaning the surface with a non-abrasive cloth, warm water and neutral soap. After cleaning, we recommend drying the surface thoroughly.

Non-abrasive household cleaners or solvents can also be used. If the residues are old or hardened, use a magic eraser or soft cloth to remove them. After using the solvent, we recommend washing with warm water and detergent, always making sure to remove all traces of detergent to avoid drying stains.

In case of micro-scratches on FENIX® surfaces, follow the instructions below:

- Place a damp paper towel on the area where the micro-scratches can be seen.
- Apply heat to the surface to be repaired. Do not leave the iron on the part of the surface for more than 10 seconds.
- Rinse the repaired area with warm water and a microfibre cloth.

Maintenance recommendations:

- The surface should never be treated with products containing abrasive substances, micro-abrasive sponges or unsuitable tools such as sandpaper or scouring pads.
- Acids or very alkaline products should be avoided.
- Strong bleaches or chlorine bleaches should be avoided as they may damage the surface. Use sodium hypochlorite in a concentration of less than 5% for a maximum of 5 minutes and then rinse with a sponge or towel.
- Hydrogen peroxide in a concentration of less than 3% should be rinsed carefully. It is recommended to avoid contact for more than 10 minutes for concentrations above 3%, the surface should be thoroughly rinsed with a dry, non-abrasive sponge.
- When solvents are used, the cloth used must be perfectly clean so that it does not leave marks on the surface. However, any marks can be removed by rinsing with hot water and drying.
- Do not use furniture polish or wax-based cleaners in general, as they tend to form a sticky film on the dense surface of FENIX®, to which dirt adheres.
- Do not use metal spatulas, iron brushes or other metal tools to remove stains, paint, plaster or any other substance.

***Remark:** to keep wooden furniture in the best condition, keep it away from water, excess of humidity, intense heat and direct exposure to the sun's rays.

GLIDES

With continued use, the glides of the structures wear out. We recommend periodically checking its status. If they are worn, they must be replaced to avoid damage to the floor. INCLASS products fit standard plastic glides suitable for a wide variety of floor types. As an option, we offer the possibility of equipping your furniture with special glides for specific types of floors. If you have any questions, please ask our Customer Service department to find out the right type of glide suitable for your floor.

CASTERS

With the use, dust and debris may accumulate on your chair casters leading to premature loss of mobility and performance. A regular cleaning and maintenance are needed to prolong the right function of your chair casters.

DISINFECTION

Due to the COVID 19 pandemic, many people wonder how to properly clean their furniture to prevent and avoid the transmission of the virus without damaging its surface materials. In order to inform you, INCLASS has published a disinfection guide with useful tips to disinfect the different surfaces of your furniture. You can consult our disinfection guide in the following [Link](#).
